

# Neuroinflammation: Mechanisms and Management (Contemporary Neuroscience)

An unprecedented review of our current knowledge of the neuroinflammatory mediators and cells involved in neurodegenerative diseases. Beginning with a detailed review of our current concepts of which biochemical mediators are involved in neuronal loss and the mechanisms of cell death, the distinguished contributors critically examine those areas of current research involved in the design of specific pharmacological agents to inhibit at defined points in the neuroinflammatory cascade. They also address the molecular, cellular, and disease model actions of first-generation agents, as well as the potential clinical relevance to AIDS-related dementia, Alzheimers disease, amyotrophic lateral sclerosis (ALS), Downs syndrome, Huntingtons disease, multiple sclerosis, Parkinsons disease, and stroke.

We've started our countdown to National Handbag Day on October 10, and that means we'll have special features for you every day, right up to the big event! Today, we're here to talk about the intersection of celebrity and accessories, and more specifically, how the two can become intertwined in public consciousness for years. The kinds of stars who carry a particular bag do a lot to shape the market's perception of it and the designer who created it, which is why so many brands give out free bags to stars now: they're hoping to create positive associations. In the cases you see below, though, things came along a little bit more naturally. You can't rush love, after all. Think of a bag-celeb duo we missed? Let us know in the comments!
