

# Neutralization of local rabies virus isolates with ERA based vaccine

Genotypes other than classical rabies virus in the genus *Lyssavirus* can cause disease similar to rabies through host switching from bat in to terrestrial animals. All vaccinal strains currently available developed from rabies virus and neutralize partially or may not neutralize rabies related viruses based on glycoprotein structure similarity. As an example, classical rabies based vaccine cannot protect from disease caused by African divergent genotypes; Mekola and Legos bat rabies related viruses. Thus, evaluation of locally produced vaccine with locally circulating viruses help to reduce possible protection failure and guarantee efficacy of the vaccine. This book also briefly describes techniques and methodology used to test pathogenicity and cross neutralization of *Lyssavirus* and helps to undertake different laboratory activities when dealing with *Lyssavirus*, specifically rabies virus.

We've started our countdown to National Handbag Day on October 10, and that means we'll have special features for you every day, right up to the big event! Today, we're here to talk about the intersection of celebrity and accessories, and more specifically, how the two can become intertwined in public consciousness for years. The kinds of stars who carry a particular bag do a lot to shape the market's perception of it and the designer who created it, which is why so many brands give out free bags to stars now: they're hoping to create positive associations. In the cases you see below, though, things came along a little bit more naturally. You can't rush love, after all. Think of a bag-celeb duo we missed? Let us know in the comments!
