

## Emulsion-based Vaccine Adjuvants

Emulsions are the next most widely used adjuvants in human vaccines after alum-based formulations. Their importance in modern vaccines is underscored by their demonstrated record of stability, safety, and enabling of antigen dose-sparing. The book includes an introduction addressing a historical perspective and exploring currently available adjuvants. The book then profiles two leading emulsion adjuvants for human use: MF59 (Novartis) and AS03 (GlaxoSmithKline) and concludes with an overview of innovations in technology covering next-generation emulsions. Together, the chapters in this volume provide a snapshot of emulsion adjuvant history, current human use and safety, and future development directions

We've started our countdown to National Handbag Day on October 10, and that means we'll have special features for you every day, right up to the big event! Today, we're here to talk about the intersection of celebrity and accessories, and more specifically, how the two can become intertwined in public consciousness for years. The kinds of stars who carry a particular bag do a lot to shape the market's perception of it and the designer who created it, which is why so many brands give out free bags to stars now: they're hoping to create positive associations. In the cases you see below, though, things came along a little bit more naturally. You can't rush love, after all. Think of a bag-celeb duo we missed? Let us know in the comments!
