

The Human Complement System in Health and Disease

This authoritative, single-source reference provides comprehensive examinations of the complement system-offering recent findings in basic science on the structure, biology, physiology, and pathophysiology of complement proteins and the latest therapeutic approaches towards the control of complement-mediated diseases. Written by over 40 international experts from North America, Europe, and Asia, *The Human Complement System in Health and Disease* describes the molecular architecture of the complement system details the structure of complement genes discusses gene organization as well as the topology and chemistry of ligand-binding sites and catalytic centers of complement proteins analyzes complement organization and activation, including phylogeny and the newly discovered lectin pathway elucidates the regulation of complement gene expression and the structure and function of bioactive peptides explicates opsonic and immunoregulatory properties of complement fragments, endothelial responses, and interactions with viruses and bacteria and more!

We've started our countdown to National Handbag Day on October 10, and that means we'll have special features for you every day, right up to the big event! Today, we're here to talk about the intersection of celebrity and accessories, and more specifically, how the two can become intertwined in public consciousness for years. The kinds of stars who carry a particular bag do a lot to shape the market's perception of it and the designer who created it, which is why so many brands give out free bags to stars now: they're hoping to create positive associations. In the cases you see below, though, things came along a little bit more naturally. You can't rush love, after all. Think of a bag-celeb duo we missed? Let us know in the comments!
