

Setting Priorities in Health Care

Setting Priorities in Health Care Edited by M. Malek University of St Andrews, Fife, Scotland As Western industrialised countries struggle to address the dual problems of securing access to health care and containing the ever increasing cost of health care delivery, the issue of prioritisation ranks high on the agenda of all interested parties from clinicians to policy makers. Extending waiting times for some operations (the case in the United Kingdom) or excluding a segment of the population (uninsured or under-insured in the United States) are just two ways of rationing health care resources through prioritisation, both of which demonstrate the minefield of philosophical, ethical, conceptual and methodological problems surrounding this issue. While these concerns have been openly debated in the United States, there has been very little public academic discussion on the implications and consequences of prioritisation and the inevitability of health care rationing in one form or another. This book presents such a discussion from the multi-disciplinary perspectives of health economics, health care management, marketing, policy and clinical practice. Vacani, J. Rasquinha and P. Davey

We've started our countdown to National Handbag Day on October 10, and that means we'll have special features for you every day, right up to the big event! Today, we're here to talk about the intersection of celebrity and accessories, and more specifically, how the two can become intertwined in public consciousness for years. The kinds of stars who carry a particular bag do a lot to shape the market's perception of it and the designer who created it, which is why so many brands give out free bags to stars now: they're hoping to create positive associations. In the cases you see below, though, things came along a little bit more naturally. You can't rush love, after all. Think of a bag-celeb duo we missed? Let us know in the comments!
