

Eosinophils, Allergy and Asthma

The eosinophil is a type of white blood cell which plays a crucial role in the immunological defence mechanisms of the human body. Professor Kay has brought together an internationally respected group of doctors and scientists to produce a research level monograph which describes the recent advances in understanding which have placed the eosinophil at the centre of numerous pathophysiological mechanisms underlying allergy and asthma. This up to date, state of the art treatise includes chapters on the molecular biology and immunology of the eosinophil, the interactions of eosinophils with other blood elements and with the major immunological mediators in the body such as interleukin-5, platelet activating factor. There is also detailed coverage of the very latest advances in the anti-allergic drug research which promise to revolutionise the therapy of allergy and asthma.

We've started our countdown to National Handbag Day on October 10, and that means we'll have special features for you every day, right up to the big event! Today, we're here to talk about the intersection of celebrity and accessories, and more specifically, how the two can become intertwined in public consciousness for years. The kinds of stars who carry a particular bag do a lot to shape the market's perception of it and the designer who created it, which is why so many brands give out free bags to stars now: they're hoping to create positive associations. In the cases you see below, though, things came along a little bit more naturally. You can't rush love, after all. Think of a bag-celeb duo we missed? Let us know in the comments!
